This Secure-Delete Package

Really Works and the download version is ONLY \$16.95

NEW Secure-Delete software. Government-standard deletion software, destroy files and folders forever! Click HERE - www.Secure-Delete.net

Have you upgraded your PC lately and wondered what to do with your old outdated PC? I have helped many people upgrade theirs and short of busting up the disk drive - I know people who do take a hammer to their old drives, there is a

Convert all your documents to Adobe PDF Format...

This converter works just like selecting a printer, except it creates an Adobe.pdf file right from your word processor.

Downloadable version
Special Offer **DISCOUNTED PRICE**

\$19.95

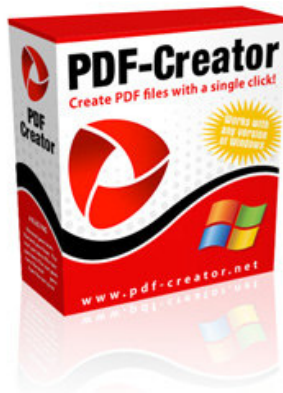

better way to permanently delete private information. Because of this, I have researched a product called Secure-Delete that let's you delete personal, financial and private files so that even the government can't retrieve them.

Delete files for good!

You see, when you delete something from your computer, it doesn't disappear -- it just waits hours, days and sometimes even weeks to be overwritten by something else. Until then, it's right there, for anyone who wants to come and have a look at it.

Yes, that's right. When you delete or clear anything from your PC -- whether it's old documents, e-mail messages or Internet favorites -- even when you have cleared them out of the Recycle Bin -- anyone with moderate technical ability can retrieve them in just a minute or two.

Scary, eh? So I went looking for a tool that could make sure that when I delete something, it stays deleted! I found Secure-Delete at <http://www.secure-delete.net> - it does just what it says on the box and it's an absolute must for anyone that values their privacy.

Unless you're a complete Internet newbie (and I know you're not!), you must have noticed that documents of any importance that you download from the Web are in PDF format.

PDFs are great aren't they?

No matter what operating system you're running or what software you use, PDFs come to you exactly as the author intended, with the layout, fonts and images all perfectly preserved in a single small file for you to download.

People have come to expect e-books, brochures and any other downloadable documents to be in PDF format. What tool do you use to create yours?

I convert all my documents to PDF for distribution via email, sending to the printer and general distribution when I don't want a changeable document floating around. - Ron
